The reporting projects at Finansinspektionen

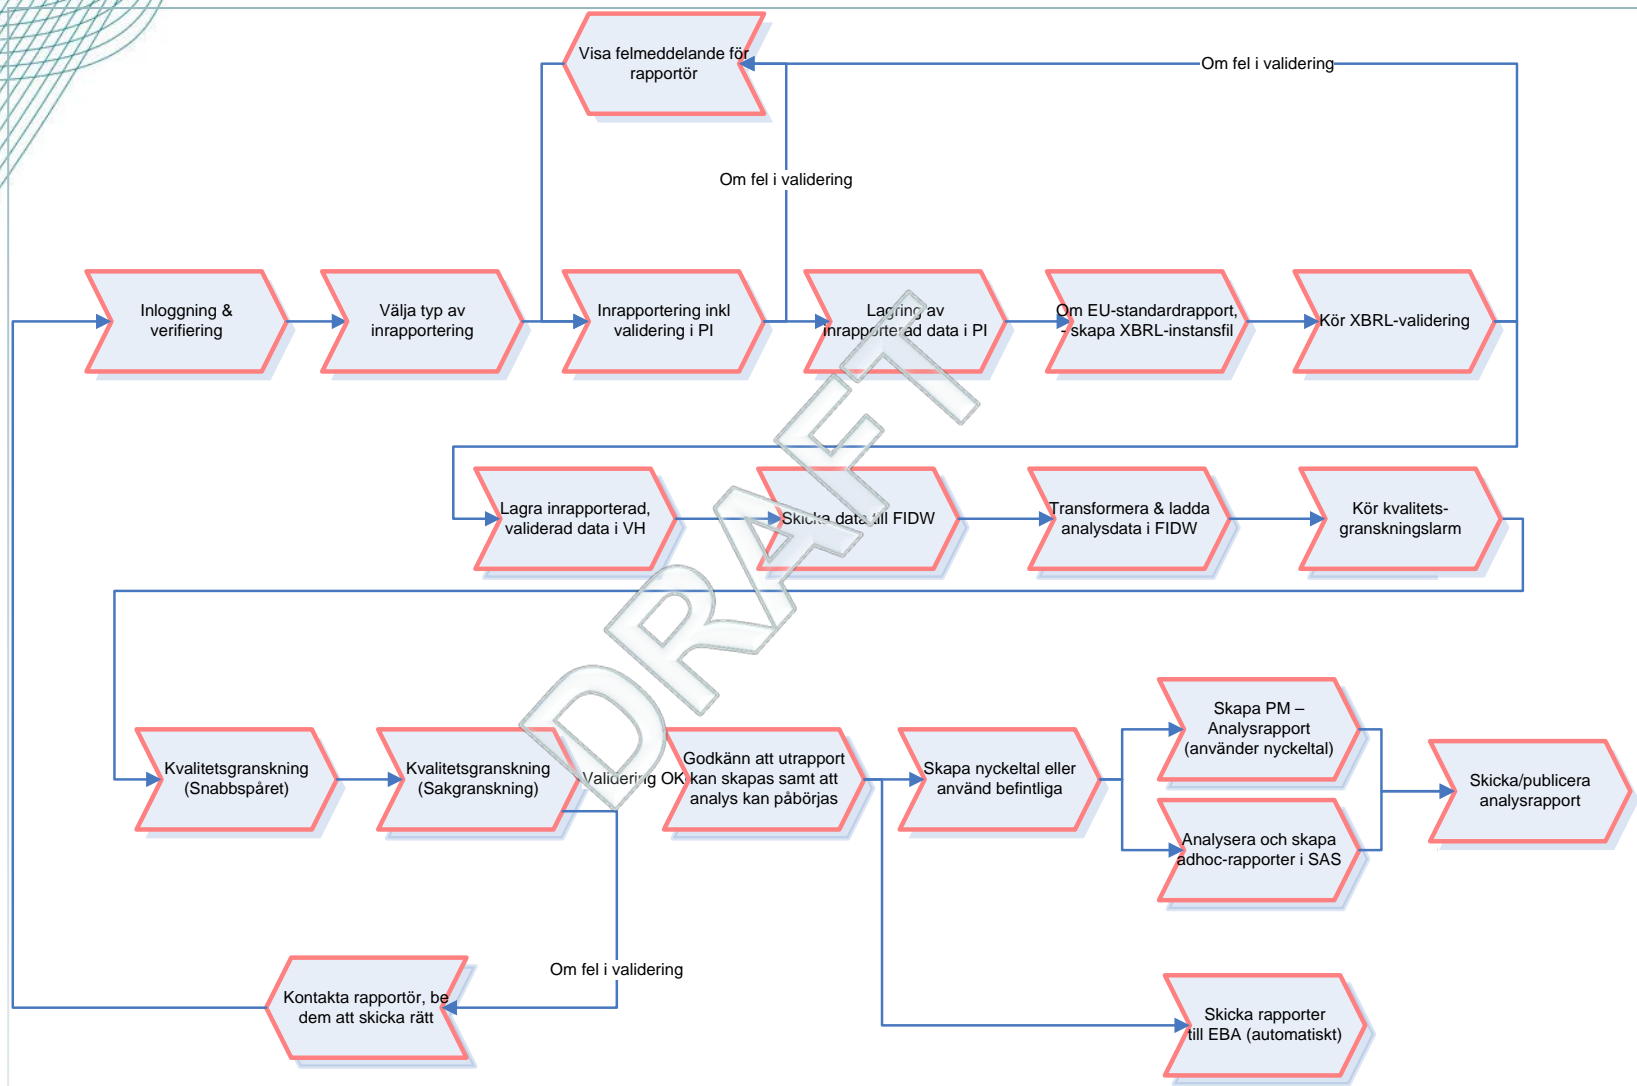

- A number of projects is going on at Finansinspektionen to handle the new requirements.
- New processes and workflows are also needed.
- Processes and workflows has to adopted to match the European processes.

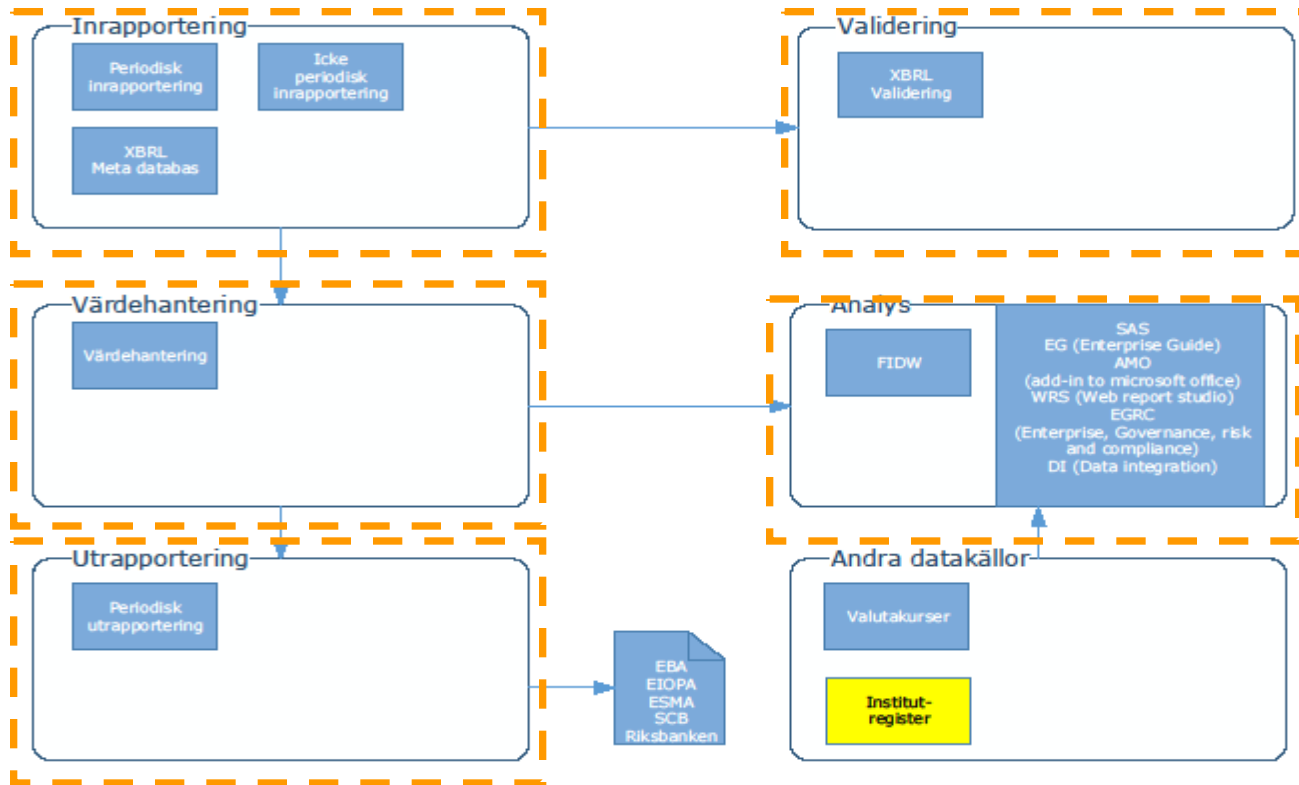

Background reporting projects Finansinspektion

- Need to handle local reporting, not taxonomy
- Need to handle taxonomy reporting
- Reuse technology
- Have the ability to do local validations

Comprehensive process CRD4 reporting

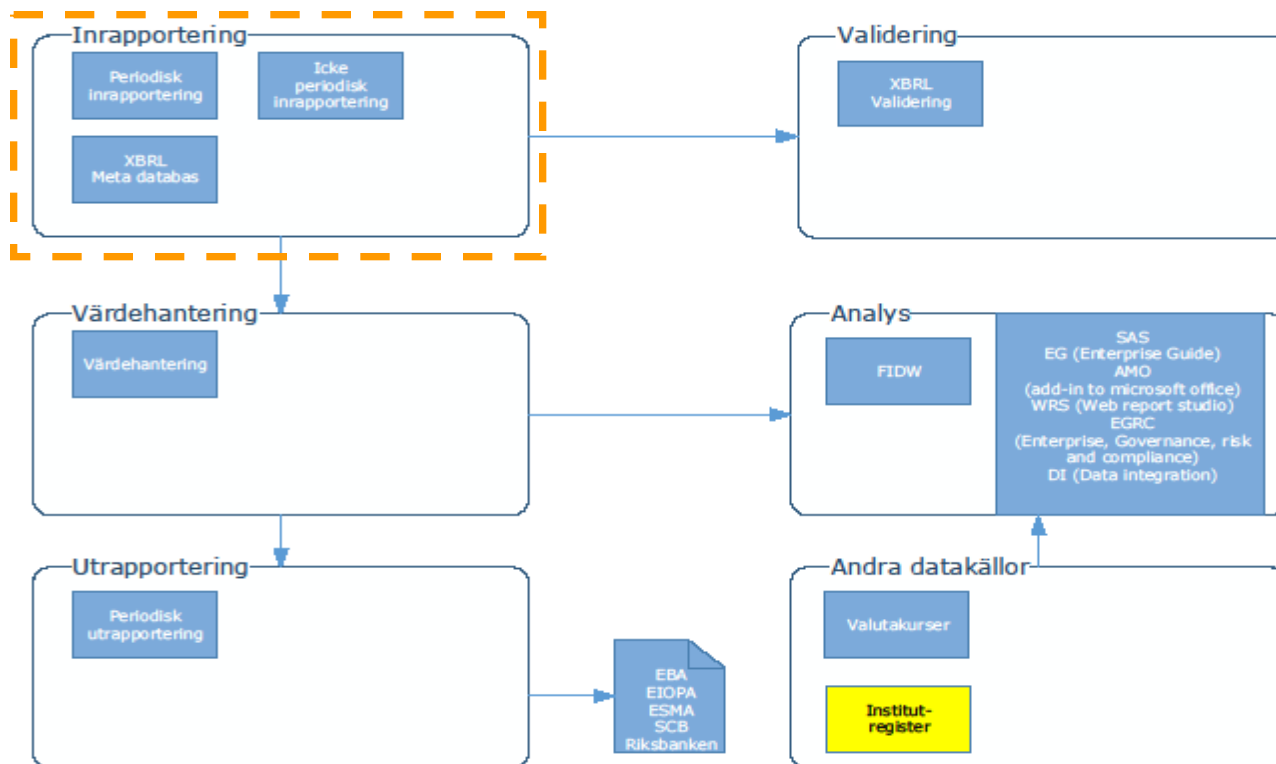

Infrastructure

- 15
- Java
- Windows server

Infrastructure

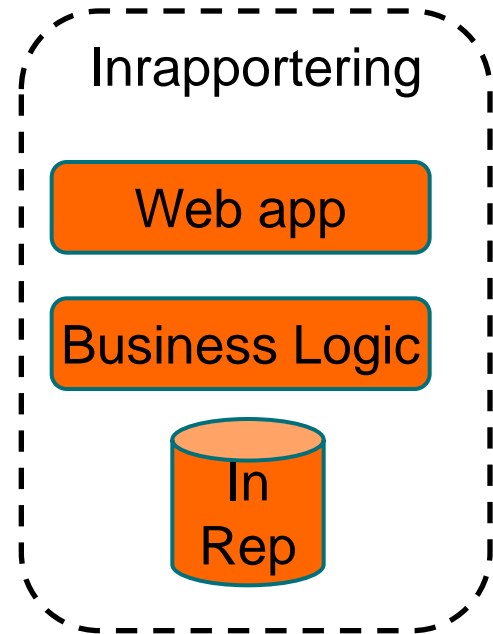

- 15
- Java
- Windows server

Automated creation of form

Version handling of Metadata

Reuse the same design principles as non taxonomy reporting

Test

- The first test of the new system will be carried out by a small test group
- Likely to be the same as the old test group.
- There will be a full scale test environment for testing new XBRL-reports
